## Relevant Experience

### ASP.NET & React Developer · Micway Transport April 2024 — Present

- Helped create and maintain useful and re-usable React components in TypeScript for a custom built Transport Management System that provides functionality across all aspects of the business, mainly focused on Driver management and HR purposes
- API integration and data gathering for an Android app built in-house that is used to scan pallets and automatically create necessary authorisation sheets for Supervisors
- Maintaining and creating server side functionality for a C# ASP.NET API which communicates with the front end and an SQL database
- Answering and troubleshooting level 3 and 4 IT support tickets for general staff that use the in-house systems Microsoft office applications

### Web Developer · Masters Agency Nov 2022 — April 2024

- Successfully creating multiple websites using WordPress & Webflow and custom JavaScript
- Integrating AWS to improve performance
- Conducting one-time performance audits for external clients to optimize page loading speed, functionality, and accessibility by identifying and removing bloated and unused software
- Providing IT consultancy to clients and colleagues on a range of technological issues
- Communicating with clients to understand their technological needs and ensure successful project delivery
- Use of Figma and Notion to effectively interpret specifications from each department to meet project goals

### Full Stack Developer · Yora Settlements Nov 2021 — Sept 2022

- Custom OAuth authentication and routing in a TypeScript single-page Svelte application using AWS Cognito and pre-built API interfaces
- Construction of the main landing website for yora.tech, including a custom table displaying coin price fluctuations and media queries for HTML/CSS cross-compatibility
- Development of a candlestick and line chart with JavaScript/HTML/CSS using fetched user data from a pre-established endpoint
- Implementation of a password recovery system using JavaScript and a pre-established API
- Creation of a custom CSS/SASS widget for calculating the difference in current coin trading prices between competing cryptocurrency platforms

## Skills

### Programming Languages

JavaScript, TypeScript, C#, HTML, CSS, Sass, PHP, SQL

### Libraries & Frameworks

React, React Native, Vue, Tailwind,

### Tools & Platforms

Git, GitHub, Docker, WordPress, Webflow, AWS, Figma, Notion, NeoVim, Linux, Azure

## Selected Projects

### Discord Bot

A bot running on a private community server with commands for fetching cached messages, API calls to list upcoming game sales, and more.

### Portfolio Website

Personal website built with TypeScript and Tailwind, deployed on GitHub Pages

## Education

### Western Sydney University

Bachelor of Computer Science  
Majored in Systems Programming  
5.3 GPA

## Interests

Running, swimming, cooking, long fantasy novels, annoying my cat
